MSD Construction Project Update

CSO 12 Sewer Separation Phase A.4a in Camp Washington

The Metropolitan Sewer District of Greater Cincinnati (MSD) has been working on the CSO 12 Sewer Separation Phase A.4a project in Camp Washington since the fall of 2014. Work is anticipated to be completed by fall of 2015. The project will connect to a new stormwater box culvert currently being built by the Ohio Department of Transportation (ODOT) under I-75.

The project is part of a multi-year and multi-phased project to reduce combined sewer overflows (CSOs) into the Mill Creek by conveying stormwater directly to the Mill Creek.

Traffic Pattern Update

Beginning on Monday, February 2, 2015, Colerain Avenue will be closed between Elam Street and Ethan Avenue in Camp Washington and will remain closed until early summer, pending weather and the contractor's schedule.

During this time, the contractor will relocate a combined sewer and water main on Colerain Avenue and begin installing a 10x 12' stormwater box culvert from the junction chamber at Colerain Avenue and Stock Street to the east end of Stock Street. MSD will also be installing new pavement, curbs and sidewalks along this portion of Colerain.

The detour to northbound Colerain Avenue is east on Hopple Street to the new Central Parkway Connector, north on Central Parkway, and west on Monmouth Street to Colerain Avenue.

For additional information about the project, please contact MSD Engineering Customer Service at (513) 557-3594 or MSD.Communications@cincinnati-oh.gov.
